

DNS RESOLVER

mydig.py

@author Iman Ali (112204305)

Resolving A record for a query.
Returns CNAME, if it cannot be resolved.

External Libraries Used: dnspython

Dnspython was only used to create a request and to send the query to its destination.

Instructions to run program:

Please open the terminal and use the command line to enter the directory for the program.

On the terminal, you can call mydig.py followed by the domain name to get the ip address.

Example:

- python3 mydig.py [domain name]
- python3 mydig.py www.yahoo.com
- python3 mydig.py google.com
